Software Configuration Management Plan of Academic and Administrative System Software

SMP

Version: 03

Page 1 / 14

1. INTRODUCTION

1.1 Purpose

This plan defines the software configuration management (SCM) activities that will be applied to the development of the academic and administrative system for the graduate program in Software Engineering at CUValles.

1.2 Scope

The plan covers all the system configuration elements that are directly or indirectly involved in the academic and administrative functions of the postgraduate program. These elements include:

- **Users:** components related to authentication, registration, editing, and password recovery.
- **Students, teachers, and academic processes:** modules for registration, editing, searching, deleting, viewing, and exporting data.
- **Technical documentation:** installation guides, maintenance manuals, testing documents, and user manuals.
- **Database scripts and structure:** SQL files and connection settings.

1.3 Key Definitions

Acronym	Full Form
SCM	Software Configuration Management
CI	Configuration Item
CCB	Configuration Control Board
CR	Change Request
FR	Functional Requirements
NFR	Non-Functional Requirements
HR	Human Resources

Page 2/ 14

2. CONFIGURATION MANAGEMENT ORGANIZATION

2.1 Roles and Responsibilities

Role	Responsibility
Configuration Manager (SCM Manager)	Supervises and ensures the plan is followed.
Analyst	Analyzes change requests, identifies affected areas, and documents functional and non-functional requirements.
Developers / QA Manager	Manage version control and software releases.
Change Control Board (CCB)	Reviews and approves all proposed changes.

2.2 Composition of the CCB

Role	Responsibilities
Project Manager	Evaluate the global impact of the changes.
QA Manager	Verify quality and risk.
Client Representative	Validate requirements and priorities.
SCM Administrator	Record decisions and maintain traceability.
Lawyer	Ensure legal compliance and review contracts or agreements.
Financial	Analyze the economic viability of changes, estimate costs, and ensure budget alignment.
Human Resources Manager	Evaluate the impact of changes on staff, manage resource allocation, and ensure appropriate training and communication.

3. CHANGE MANAGEMENT

3.1 Change Request

CR1: The client requests distributed architecture based on the geographical sites of a series of colleges. This implies the creation of a new module that integrates college systems that work in locations worldwide. The implications of the CR are complying with the regulations of each country and the differences in the infrastructure of the internet services, browsers, and allowed SQL Managers.

CR2: The local government issued a law that requires students who do not attend school regularly to report to a government server.

CR3: The client requests a module for checking the daily activities of teachers, including entering the school premises, exiting once the labor is finished, and registration of classes delivered daily.

Analysis of Change Requests

CR	Understanding the Change Request	Functional / Non-Functional Requirements	Affected Areas	Activities	Resources	Risks
CR1	The client wants a distributed system to connect universities in different places. It must follow local laws, work with the internet and	FR: <ul style="list-style-type: none"> • Connect systems of many universities. • Login and share data between campuses. • Central and regional management. NFR:	<ul style="list-style-type: none"> • System design (from one place → many places). • Backend (services and APIs). • Shared database. • Security (higher risk because there 	<ul style="list-style-type: none"> • Analysis (2 weeks). • Backend/frontend coding (4 weeks). • Testing and integration (2 weeks). • Deployment and documents (1 week). 	<ul style="list-style-type: none"> • Time: 8 weeks. • Budget: 40,000 MXN. • HR: 2 developers, 1 QA, 1 analyst, 1 configuration manager 	<ul style="list-style-type: none"> • <i>Technical:</i> system not compatible, slow internet. • <i>Legal:</i> not follow the law. • <i>Operational:</i> difficult setup, system too heavy.

3.2 Policies

Each change request (CR) must have a unique identifier.

Every CR must include a technical, legal, operational, and resource analysis before it is approved.

The Change Control Board (CCB) is responsible for approving or rejecting changes based on the risks and how they align with the project goals

BUDGET POLICIES

- Every change request (CR) must have an approved budget before it starts.
- No change can be made without enough money.
- Up to **20% more money** is allowed if the change is difficult, global, or has outside problems.
- Up to **10% risk** is allowed for big changes that need quality control.
- Up to **5% risk** is allowed for small or maintenance changes.
- All expenses must be written in the project's financial system and connected to the CR number.
- If there is not enough money, changes will be done in this order: Legal changes, Keep the system working, Improve functions.
- When each change is finished, a financial report must show planned and real costs and explain the differences.

TIME POLICIES

- Each CR must have a work plan with estimated dates.
- Up to **30% more time** can be given if the change has technical risks.
- Up to **20% more time** is okay for changes that affect part of the system.
- Only **15% more time** is allowed for small changes, like database or interface fixes.
- All activity dates must be written in the project calendar.

BUDGET AND TIME RELATED POLICY

Software Configuration Management Plan of Academic and Administrative System Software

SMP

Version: 03

Page 7/ 14

- For every 10% increase in execution time, the total cost may go up by 3–5%.
- It must be checked that any extra time stays inside the approved budget.
- If the extra time makes the cost higher than the limit, the change must be adjusted, planned again, or reviewed by the CCB.
- Every change must have an approved budget and schedule before it starts.
- At the end of each change, a report about money and time will be made, comparing planned and real values, and explaining any differences.
- Any difference bigger than the allowed limit must be reported and explained to the CCB.

HUMAN RESOURCES POLICIES

- Each CR must have a clear team with roles for every person.
- No change can start if the team is not available.
- Team members must have the right technical skills.
- For difficult changes, training must be given if needed.
- When the change ends, the team's time and quality must be checked.

3.3 FODA Matrix

CR1:

STRENGTHS	WEAKNESSES
• The system connects many universities.	• Very complex system (distributed design).
• Helps global work and communication.	• May take more time and money.
• Can be used in different locations.	• Hard to follow many international laws.
• Team has people with different skills.	• Needs strong tests for security and connection.

Software Configuration Management Plan of Academic and Administrative System Software

SMP

Version: 03

Page 8/ 14

OPPORTUNITIES	THREATS
• Can grow to more countries or universities.	• Legal problems when sharing data between countries.
• Can connect with other services or APIs.	• Slow speed or bad internet connection.
• Improves the university's reputation.	• Some browsers or SQL may not work well.
• Helps to make common academic processes.	• Higher cost if time increases.

CR2:

STRENGTHS	WEAKNESSES
• Makes legal reports automatic and fast.	• Depends on the government's server.
• Follows all legal and security rules.	• Connection may fail sometimes.
• Low cost and short time to build.	• May reduce system performance.
OPPORTUNITIES	THREATS
• Can be used for other automatic reports.	• Government server problems stop the process.
• Improves communication with authorities.	• Fines or legal problems if reports are wrong.
• Can give useful attendance statistics.	• Law changes may require new updates.
• Makes the system look more professional.	• Data leaks can damage reputation.

CR3:

STRENGTHS	WEAKNESSES

Software Configuration Management Plan of Academic and Administrative System Software

SMP

Version: 03

Page 9/ 14

• Fast and low-cost to create.	• Some teachers may not want to use it.
• Helps control daily schoolwork.	• Time records may be wrong.
• Easy to connect with current login system.	
OPPORTUNITIES	THREATS
• Helps study teacher performance.	• Teachers may reject the system.
• Can be used for evaluation systems.	• Legal risk if personal data is not safe.
• Makes the school more transparent.	• Technical errors can lose data.
	• Needs more training → more time.

3.4 Change Request Decision Process

Change Control Board (CCB) Opinion on Change Request

CR1:

Role	Opinion	Decision
Project Manager	Conditional approval	The technical work is big. The schedule and resources must be checked again to keep system stability.
QA Manager	Conditional approval	A global test plan and performance tests are needed. There is a high risk of delay problems.
Client Representative	Approved	Thinks the function is important for the system's international growth.
SCM Administrator	Conditional approval	The baseline must be updated, new service versions defined, and all site dependencies documented.

Software Configuration Management Plan of Academic and Administrative System Software

SMP	Version: 03	Page 10/ 14
-----	-------------	-------------

Lawyer	Conditional approval	There are legal risks with data between countries. Each region needs legal review.
Financial Manager	Not approved (this phase)	Extra cost is more than 20%. Suggests doing it in steps (regional first, then global).
Human Resources Manager	Conditional approval	Need to hire or train people with experience in distributed systems.

Final CCB Decision:

Approved with conditions: The change is possible but must be done in two phases (national first, then global). Legal and financial rules must be checked before moving forward.

CR2:

Role	Opinion	Decision
Project Manager	Approved	The function is important for legal reasons and does not affect the main architecture.
QA Manager	Conditional approval	Secure connection tests and sending simulations must be done to ensure good availability.
Client Representative	Approved	Meeting legal requirements; the client says it is urgent.
SCM Administrator	Approved	The change can be managed as a new independent module, keeping traceability and low impact on the baseline.
Lawyer	Approved	It is required by law; not doing it could cause legal problems. Data encryption must be used.

Software Configuration Management Plan of Academic and Administrative System Software

SMP	Version: 03	Page 11 / 14
-----	-------------	--------------

Financial Manager	Approved	The cost (25,000 MXN) is inside the limit and needs no extra budget.
Human Resources Manager	Approved	The needed staff are available; only coordination between QA and development is required.

Final CCB Decision:

Approved without conditions: The change is legally required, with low technical and financial risk, and will be implemented as a priority.

CR3:

Role	Opinion	Decision
Project Manager	Approved	Low technical impact, easy to integrate with the existing system.
QA Manager	Conditional approval	Need to check registration time and do usability tests to avoid human errors.
Client Representative	Approved	Improves supervision and academic control. The client sees it as added value.
SCM Administrator	Approved	Very small changes in the baseline; easy to follow the version.
Lawyer	Conditional approval	Must protect teachers' personal data according to privacy law.
Financial Manager	Approved	The cost (15,000 MXN) is low and fits the maintenance budget.
Human Resources Manager	Conditional approval	Short training is needed for teachers before using the new module.

Software Configuration Management Plan of Academic and Administrative System Software

SMP

Version: 03

Page 12/ 14

Final CCB Decision:

Approved: The change has low risk and low cost, and it improves academic management. Only small adjustments in training and data privacy are needed.
